

## **SUPERVISOR REPORT**

Name of Master Thesis: **Analysis of Energy Savings Measures in Public Building in Russian Federation**

Student: **Bc. Anastasiya Chernaya**

The main aims of the discussed thesis were to identify and analyze available energy saving measures in public building in Russia Federation. Secondary goal was to calculate economic effectiveness of identified measures for Tomsk Polytechnic University and provide recommendation how to save energy, operational expenses and improve inner environment.

During the educational exchange in the Czech Republic our cooperation with Ms. Chernaya was exemplary. She took part in regular meetings and she was always prepared and proactive and I also do appreciate her diligence.

Even though there are few minor imperfections (especially in the way of presenting obtained results) the overall quality of the work remains very good. All appointed goals were fully reached and some of identified measures seem very promising for future implementation. Also all formal requirements have been met.

Taking in to an account the final quality of the work and the attitude of Ms. Chernaya during our whole cooperation I recommend the thesis to be accepted and to be graded

**B – very good**

and I have no additional questions.
