

## Review report of a final thesis

**Student:** Tomáš Stefan  
**Reviewer:** Ing. Tomáš Zahradnický, Ph.D.  
**Thesis title:** Digital Signature Verification in PDF  
**Branch of the study:** Computer Security and Information technology

**Date:** 8. 6. 2018

<i>Evaluation criterion:</i>	<i>The evaluation scale: 1 to 4.</i>
<b>1. Fulfilment of the assignment</b>	<b>1 = assignment fulfilled, 2 = assignment fulfilled with minor objections, 3 = assignment fulfilled with major objections, 4 = assignment not fulfilled</b>
<i>Criteria description:</i> Assess whether the submitted FT defines the objectives sufficiently and in line with the assignment; whether the objectives are formulated correctly and fulfilled sufficiently. In the comment, specify the points of the assignment that have not been met, assess the severity, impact, and, if appropriate, also the cause of the deficiencies. If the assignment differs substantially from the standards for the FT or if the student has developed the FT beyond the assignment, describe the way it got reflected on the quality of the assignment's fulfilment and the way it affected your final evaluation.	
<i>Comments:</i> I consider the assignment fulfilled.	
<i>Evaluation criterion:</i>	<i>The evaluation scale: 0 to 100 points (grade A to F).</i>
<b>2. Main written part</b>	<b>95 (A)</b>
<i>Criteria description:</i> Evaluate whether the extent of the FT is adequate to its content and scope: are all the parts of the FT contentful and necessary? Next, consider whether the submitted FT is actually correct – are there factual errors or inaccuracies? Evaluate the logical structure of the FT, the thematic flow between chapters and whether the text is comprehensible to the reader. Assess whether the formal notations in the FT are used correctly. Assess the typographic and language aspects of the FT, follow the Dean's Directive No. 26/2017, Art. 3. Evaluate whether the relevant sources are properly used, quoted and cited. Verify that all quotes are properly distinguished from the results achieved in the FT, thus, that the citation ethics has not been violated and that the citations are complete and in accordance with citation practices and standards. Finally, evaluate whether the software and other copyrighted works have been used in accordance with their license terms.	
<i>Comments:</i> Length of the thesis meets criteria for a bachelor thesis. The thesis is well organized. First it starts with a generic digital signature description, then gives state of the art in PDF digital signatures, including common Windows and Linux software. The student then presents design of his pdf-sigil library and demonstrates its use on a set of sample PDF files. I find that sources are properly cited throughout the thesis. The bibliography is rich. I find only tiny typographical issues and few wrong articles. Otherwise have no other objections.	
<i>Evaluation criterion:</i>	<i>The evaluation scale: 0 to 100 points (grade A to F).</i>
<b>3. Non-written part, attachments</b>	<b>95 (A)</b>
<i>Criteria description:</i> Depending on the nature of the FT, comment on the non-written part of the thesis. For example: SW work – the overall quality of the program. Is the technology used (from the development to deployment) suitable and adequate? HW – functional sample. Evaluate the technology and tools used. Research and experimental work – repeatability of the experiment.	
<i>Comments:</i> I am only wondering why the verification was not added to any existing library. Are there no libraries that could be extended?	
<i>Evaluation criterion:</i>	<i>The evaluation scale: 0 to 100 points (grade A to F).</i>
<b>4. Evaluation of results, publication outputs and awards</b>	<b>85 (B)</b>
<i>Criteria description:</i> Depending on the nature of the thesis, estimate whether the thesis results could be deployed in practice; alternatively, evaluate whether the results of the FT extend the already published/known results or whether they bring in completely new findings.	
<i>Comments:</i> The result is a library for PDF signature verification and a tool. Since the student did not choose a copyleft license such as CC0 or BSD, I see limited use for his product.	
<i>Evaluation criterion:</i>	<i>No evaluation scale.</i>

## 5. Questions for the defence

*Criteria description:*

Formulate questions that the student should answer during the Presentation and defence of the FT in front of the SFE Committee (use a bullet list).

*Questions:*

1. Why the student did not choose a more permissive license for his library such as CC0 or BSD?
2. Did the author tried to extend tools such as Evince that could benefit from his work?

*Evaluation criterion:*

*The evaluation scale: 0 to 100 points (grade A to F).*

## 6. The overall evaluation

90 (A)

*Criteria description:*

Summarize which of the aspects of the FT affected your grading process the most. The overall grade does not need to be an arithmetic mean (or other value) calculated from the evaluation in the previous criteria. Generally, a well-fulfilled assignment is assessed by grade A.

*Comments:*

I hereby do recommend the bachelors thesis of Mr. Tomas Stefan for defence and grade it with A (excellent).
