# Review report of a final thesis

**Student:** Martin Vatrt  
**Reviewer:** MSc. Juan Pablo Maldonado Lopez, Ph.D.  
**Thesis title:** Development, Application and Representation of Algorithms for Discoveries with the ATLAS Forward Proton (AFP) Detector at CERN  
**Branch of the study:** Knowledge Engineering  

**Date:** 29. 5. 2019

## Evaluation criterion:

<table>
<thead>
<tr>
<th>Evaluation criterion</th>
<th>The evaluation scale: 1 to 4.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Fulfilment of the assignment</td>
<td></td>
</tr>
</tbody>
</table>
**Criteria description:**  
Assess whether the submitted FT defines the objectives sufficiently and in line with the assignment; whether the objectives are formulated correctly and fulfilled sufficiently.  
In the comment, specify the points of the assignment that have not been met, assess the severity, impact, and, if appropriate, also the cause of the deficiencies. If the assignment differs substantially from the standards for the FT or if the student has developed the FT beyond the assignment, describe the way it got reflected on the quality of the assignment’s fulfilment and the way it affected your final evaluation.  
**Comments:** Assignment completed |
| 2. Main written part |  
**Criteria description:**  
Evaluate whether the extent of the FT is adequate to its content and scope: are all the parts of the FT contentful and necessary? Next, consider whether the submitted FT is actually correct – are there factual errors or inaccuracies? Evaluate the logical structure of the FT, the thematic flow between chapters and whether the text is comprehensible to the reader. Assess whether the formal notations in the FT are used correctly. Assess the typographic and language aspects of the FT, follow the Dean’s Directive No. 26/2017, Art. 3. Evaluate whether the relevant sources are properly used, quoted and cited. Verify that all quotes are properly distinguished from the results achieved in the FT, thus, that the citation ethics has not been violated and that the citations are complete and in accordance with citation practices and standards. Finally, evaluate whether the software and other copyrighted works have been used in accordance with their license terms.  
**Comments:** Clearly written, following academic standards. |
| 3. Non-written part, attachments |  
**Criteria description:**  
Depending on the nature of the FT, comment on the non-written part of the thesis. For example: SW work – the overall quality of the program. Is the technology used (from the development to deployment) suitable and adequate? HW – functional sample. Evaluate the technology and tools used. Research and experimental work – repeatability of the experiment.  
**Comments:** All good here |
| 4. Evaluation of results, publication outputs and awards |  
**Criteria description:**  
Depending on the nature of the thesis, estimate whether the thesis results could be deployed in practice; alternatively, evaluate whether the results of the FT extend the already published/known results or whether they bring in completely new findings.  
**Comments:** Hard to judge. It would have been nice if Mr. Vatrt would have told us more about the practical impact of his work. |
| 5. Questions for the defence |  
**Criteria description:**  
Formulate questions that the student should answer during the Presentation and defence of the FT in front of the SFE Committee (use a bullet list). |

---

1 = assignment fulfilled,  
2 = assignment fulfilled with minor objections,  
3 = assignment fulfilled with major objections,  
4 = assignment not fulfilled
Questions:
- The signal/background was created by you. Did you consider other methods, for example, anomaly detection instead of annotating the data with this extra feature?
- Normalizing by z-scores is usually a bad idea if there is too much noise present, as this normalization brings signal and noise at the same scale. Did you consider other methods?

<table>
<thead>
<tr>
<th>Evaluation criterion</th>
<th>The evaluation scale: 0 to 100 points (grade A to F).</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. The overall evaluation</td>
<td>80 (B)</td>
</tr>
</tbody>
</table>

Criteria description:
Summarize which of the aspects of the FT affected your grading process the most. The overall grade does not need to be an arithmetic mean (or other value) calculated from the evaluation in the previous criteria. Generally, a well-fulfilled assignment is assessed by grade A.

Comments:
Good work overall, but I think there was opportunity to try many more things.
