Further comments to the master's thesis:

The thesis has an interesting topic and the student worked on a real project, in which he measured the test data and then evaluated them. The content of the work and the results achieved are engaging, but it is clear that the student has reserved less time than needed to process his diploma thesis. In some parameters, the work is not tightened and the results obtained are not sufficiently argued and described. The formal and linguistic side also deserved more attention.

I **recommend** the master's thesis for the defence.

**Summary classification of the master's thesis .....C (good) ... 2,0**
