To whom it may concern,

Vojtech Belohlav has spent 1 year at Universitat Politècnica de Catalunya (UPC) in the research group of Environmental Engineering and microbiology (GEMMA), from September 2018 to July 2019.

During the time spent within the GEMMA group, Vojtech has demonstrate to be a very motivated student. He has worked hard, both in experimental campaigns and in the development of a numerical model. Even if he did not had previous laboratory experience, he learned very fast the analysis' techniques required for his experiments. The results obtained during his stay at the UPC were published in 4 papers (2 already published and 2 under revision).

Vojtech was always open to collaborate and he participated with enthusiasm in the laboratory activities, cooperating with several colleagues of different expertise (biochemical engineering, process engineering, microbial ecology). He established a good relationship with the other PhD students as well as the technicians, the post-doc and the professors of the group.

Your sincerely,

Enrica Uggetti

Post-doctoral researcher of the GEMMA group
