S: molded sprockets; S-C1: machined sprockets; Z-H: Multi-Hub sprockets. Other sprocket and hub sizes on request

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

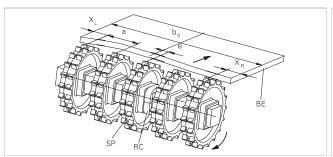

Other materials available on request.

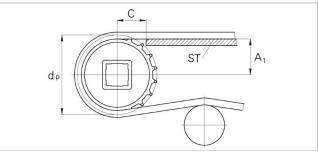

Sprocket one-piece (solid)

Sprocket arrangement

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

BE Belt **RC** Retainer **SP** Sprocket

b_o belt width **Wearstrips**

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket devide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.
